

PANEL SS450

DESCRIPTION

PRODUCT COVERED

This section of the procedure covers a steel roof panel which is identified as "Panel SS450." The panel is produced at the job sites by portable rolling machines. The panel is roll formed from No. 24 MSG minimum gauge coated steel to the configuration shown in ILL. 1. The panel may also have a paint over coating. The Report included in this Procedure, following this section, is to be examined for comparison with copies of the Report in stock. The Report issue date is October 1, 2002.

SPECIFICATION OF FINISHED PRODUCT

THICKNESS

The base metal thickness if the steel used in the fabrication of the panel shall be not less than .0225 in. (No. 23 MSG minimum gauge). This thickness shall not include the coating or any paint finish.

DIMENSIONS

The cross-section dimensions of the panel shall be in accordance with the cross-section shown in ILL. 1.

STRENGTH

The strength records of the steel shall be reviewed. The steel used shall conform to ASTM A653 Grade 50 specifications or the minimum yield point of the steel shall be 50,000 psi.

Subject: Classification of Metal Roof Deck Panels

Dear Mr. Battistella:

Project 02NK35153 was opened under File R14692 to establish UL Classification for your "SS450", "SS150", "SS675" and "FF100" metal panels. It was determined that your "SS450", "SS150", "SS675" are equivalent to the Classified panels in Construction Nos. 370, 554 and 343 respectively. It was also determined that your "FF100" panel was not equivalent to the Classified panel in Construction No. 456.

Currently, we are processing the following:

1. Follow-Up Service Procedure R14692, Volume 4.
2. Revisions to your TJPV Classification Card.
3. Revisions to Roof Deck Construction Numbers 343, 370 and 554.

This will serve to terminate Project 02NK35153.

If you have any questions on the above, please feel free to contact us.

Very truly yours,

ROBERT F. KEOGH (Ext. 41510)
Project Engineer
Fire Protection Division

DESCRIPTION

PRODUCT COVERED:

This section of the Procedure covers coated steel roof panels which are identified by the manufacturer as "SS450".

The panels are roll-formed from No. 24 MSG minimum gauge coated steel to the configuration shown in ILL. 1. The panels may also have a paint finish over the coating.

SPECIFICATIONS OF FINISHED PRODUCT:

THICKNESS

The base metal thickness of the steel used in the fabrication of the panels shall be not less than 0.0225 in. (No. 24 MSG minimum gauge). This thickness shall not include the coating or any paint finish.

DIMENSIONS

The cross sectional dimensions of the finished panels shall be in accordance with the cross section shown in ILL. 1.

The panels are made in any convenient length.

STRENGTH

The strength records of the manufacturer of the steel shall be reviewed. The steel shall conform to ASTM A653 Grade 50 specifications or the minimum yield point shall be 50,000 psi.

CLASSIFICATION INFORMATION:

The following information shall be included on all Classification Markings pertaining to products described in this section:

As To Uplift Resistance Only
Class 90
As Shown By Construction No. 370

MARKING INFORMATION:

In addition, the following information shall appear either on the product or package or on the Classification Marking:

Classified Company's name
Product identification (type designation)
and
Factory identification (if applicable).

Roof Deck Constructions

October 1, 2002

Construction No. 370
Uplift - Class 90
Fire Not Investigated

1. **Metal Roof Deck Panels*** — No. 24 MSG min coated steel panels, max 20 in. wide, min 9 in. wide, 1-1/2 in. high at female side rib. Panels continuous over three or more clips with no endlaps. A bead of sealant may be used at panel side joints.
 ATLANTA METAL PRODUCTS INC — "High Seam"
 CHARLESTON METALWORKS L L C — "1-1/2 in. Snap-Lok"
 CONSTRUCTION METAL PRODUCTS INC — "CMP Series 1000"
 NEW TECH MACHINERY CORP — "SS450"
 SPANN ROOFING & SHEET METAL INC — "Spann Series 1000"
 VINCENT METAL GOODS — "VMG System 2"
2. **Roof Deck Fasteners* (Panel Clips)** — One piece assembly, No. 24 MSG min coated steel, 1-3/4 in. wide, 1-1/4 in. high. Min thickness 0.025 in. (No. 24 MSG). Clips spaced 18 in. OC fastened to plywood deck.
 ATLANTA METAL PRODUCTS INC — "High Seam Roof Clip"
 ENGLERT INC — "Series 1000 Interlocking Clip"
3. **Fasteners (Screws)** — Fasteners used to attach panel clips (Item 2) to plywood to be No. 10-12 by 1 in. long pancake head, No. 2 Phillips drive, A-point, coated steel screw. Min one fastener per clip to be used.
4. **Underlayment** — Underlayment used over plywood deck to be type 30 organic felt. Sides overlapped min 2 in., end laps per manufacturer's instructions. Felt nailed to plywood deck with 1 in. long galv steel roofing nails, located per manufacturer's instructions. Nail spacing to be max 12 in. OC at the side lap and max 24 in. OC in interior rows.
5. **Plywood Decking** — Plywood decking to be graded per PS83 specifications, 19/32 in. thick min, exposure 1, APA rated, sq edged. Butt ends not blocked. All butt and side joints to be sealed with a one part urethane caulk sealant troweled smooth.
6. **Supports** — Spaced max of 24 in. OC. Any of the following types may be used to support the plywood decking:
 - a) 2 by 6 in. min, No. 2 grade or better A.F.P.A. S-P-F Hemlock Fir, Douglas Fir, Southern Pine or equivalent.
 - b) Wood trusses with a nom 2 by 4 in. upper chord of the same grade as Item a.
 - c) No. 22 MSG min cold formed coated steel (min yield to be 33,000 psi).
7. **Plywood Fasteners** — Fasteners used to attach the plywood deck to the supports to be as follows:
 - a) For plywood-to-wood supports No. 8-18 by 1-7/8 in. long bugle-head steel screws with a No. 2 Phillips drive, a "Hi-Low" thread pattern and an "S-Point."
 - b) For plywood-to-steel supports for a steel thickness less than No. 20 MSG, No. 7-19 by 1-1/4 in. long bugle-head steel screws with a No. 2 Phillips head drive "Hi-Low" threads and an "S-Point." For a steel thickness greater than No. 20 MSG to No. 16 MSG, No. 6-20 by 1-1/4 in. long bugle-head steel screws with a No. 2 Phillips drive and an S12 (TEKS/3)® point.
 Spacing: Fastener spacing for all fastener types to be 6 in. OC at the plywood butt edges and 12 in. OC in the interior. Refer to General Information, Roof Deck Construction (Roofing Materials & Systems Directory) for items not evaluated.

**Re: Section Analysis Report
New Tech SS450 Panel
Job No. 183-05**

Gentlemen:

Per your request, please find enclosed the engineering calculations for the above referenced project. The section, with the structural properties indicated in this report is certified to meet or exceed the requirements of the 1996 AISI Cold-Formed Steel Design Manual including Supplement No. 1 (July 1999).

Please note that the panel analysis and Load Tables have been evaluated based on the assumption that the proper bearing, side laps, end laps, bracing, anchorage and structural supports are being utilized in the member's installation. We do not certify the installation method, attachment and supporting materials.

If we can be of further assistance or if you require additional information, please call.

Sincerely,

John F. Butts, P.E.
President

	L/360	181	143	116	96	80	68	59	51	45

- Formula's used in Load Tables for FLEXURE and DEFLECTION are:
 One Span - $M_p = .125wl^2$, $M_n = .125wl^2$, $x = .0130wl^4/EI$
 Two Span - $M_p = .125wl^2$, $M_n = .096wl^2$, $x = .0092wl^4/EI$
 Three Span - $M_p = .080wl^2$, $M_n = .107wl^2$, $x = .0069wl^4/EI$
 Modulus of Elasticity (E) = 29500 ksi
- Allowable uniform loads are determined per the following:
 a) Allowable Shear Stress (Fv) [AISI, C3.2]
 b) Combined Bending and Shear [AISI, C3.3]
 c) Combined Bending & Web Crippling [AISI C3.5]
- Factors of Safety used to determine uniform loads:
 FS (Bending) = 1.67
 FS (Shear) = 1.67
 FS (Web Crippling) = 1.85
- Allowance has been made for member Dead Weight.
- Minimum panel support bearing length = 2.00 in
- Concentrated load = 250 lbs at mid-span, load width = 4 in
 Simple Span : Maximum Span = 2.024 ft (L/180)
 Two Span : Maximum Span = 2.375 ft (L/180)
 Three Span + : Maximum Span = 2.531 ft (L/180)

- Formula's used in Load Tables for FLEXURE and DEFLECTION are:
 One Span - $M_p = .125wl^2$, $M_n = .125wl^2$, $x = .0130wl^4/EI$
 Two Span - $M_p = .125wl^2$, $M_n = .096wl^2$, $x = .0092wl^4/EI$
 Three Span - $M_p = .080wl^2$, $M_n = .107wl^2$, $x = .0069wl^4/EI$
 Modulus of Elasticity (E) = 29500 ksi
- Allowable uniform loads are determined per the following:
 a) Allowable Shear Stress (Fv) [AISI, C3.2]
 b) Combined Bending and Shear [AISI, C3.3]
 c) Combined Bending & Web Crippling [AISI C3.5]
- Factors of Safety used to determine uniform loads:
 FS (Bending) = 1.67
 FS (Shear) = 1.67
 FS (Web Crippling) = 1.85
- Allowance has been made for member Dead Weight.
- Minimum panel support bearing length = 2.00 in
- Concentrated load = 250 lbs at mid-span, load width = 4 in
 Simple Span : Maximum Span = 1.999 ft (L/180)
 Two Span : Maximum Span = 2.344 ft (L/180)
 Three Span + : Maximum Span = 2.498 ft (L/180)

Analysis per 1996 AISI Cold-Formed Steel Manual + 1999 Supplement 1

New Tech SS450 Panel

FILE: SS450X18

SECTION DIMENSIONS

Line #1 Angle(L) =	-90.000 deg	Line #21 Angle(R) =	90.000 deg
Line #1 Radius(L) =	0.040 in	Line #21 Radius(R) =	0.040 in
Line #1 Length(L) =	0.000 in	Line #22 Length(R) =	1.336 in
Line #2 Angle(L) =	0.000 deg	Line #22 Angle(R) =	180.000 deg
Line #2 Radius(L) =	0.000 in	Line #22 Radius(R) =	0.100 in
Line #2 Length(L) =	0.936 in	Line #24 Length(R) =	1.254 in
Line #3 Angle(L) =	0.000 deg	Line #23 Angle(R) =	180.000 deg
Line #3 Radius(L) =	0.000 in	Line #23 Radius(R) =	0.025 in
Line #3 Length(L) =	0.000 in	Line #26 Length(R) =	0.201 in

Panel Bottom Width	=	17.87 in
Panel Overall Width	=	18.00 in
Panel Overall Height	=	1.51 in

Alloy: ASTM A792, G50

Fy = 50.00 ksi

Fv = 7.17 ksi

QUALIFICATIONS PER AISI SPECIFICATIONS

(a) Maximum w/t Ratio's Exceeded [Section B1.1(a)]: No

(b) Maximum h/t Ratio's Exceeded [Section B1.2(a)]: No
